DAZ | Arquitectura + Construcción

Every project has a story behind its form.

FORM EMERGES FROM THE RESPONSE

Understanding before intervening.
Discovering what each project requires and finding a response that gives it meaning. Form is not imposed; it emerges from the relationship between context, need, and possibility.

01. CONTEXT

Understanding the place, its history, and those who inhabit it reveals opportunities unique to each project.

02. THE PROJECT

Every project poses its own questions. The response emerges from its needs, possibilities, and constraints.

03. DOUBT

Questioning the obvious allows understanding before deciding. Doubt deepens the process.

04. EXPLORATION

Design is discovery. Each approach opens new possibilities and brings us closer to better answers.

05. ATMOSPHERE

Architecture defines space; those who inhabit it give it meaning. Light, proportion, and material shape experiences.

06. CONSTRUCTION

Design, structure, and materiality converge into a single response. Technical precision transforms intention into architecture.

DESIGN & EXECUTION

DAZ | Arquitectura + Construcción

DAZ | Arquitectura + Construcción

The intervention begins with a comprehensive reading of the space and the needs of those who inhabit it. Each element is introduced to make the most of the available area, integrate functions, and maintain visual and material continuity. Within these principles, furniture ceases to be an accessory and becomes an essential part of the spatial organization.

INTEGRATED STORAGE

Furniture incorporates storage capacity without introducing standalone elements that compromise spatial continuity.

SPATIAL PERCEPTION

The reduced depth and low profile of the furniture preserve an unobstructed visual reading of the interior.

MATERIAL CONTINUITY

The preservation of original finishes and a coordinated palette visually extend the space while avoiding unnecessary interventions.

INTEGRATION

Millwork, lighting, and equipment are incorporated as a coordinated system, allowing each element to address functional and spatial needs simultaneously.

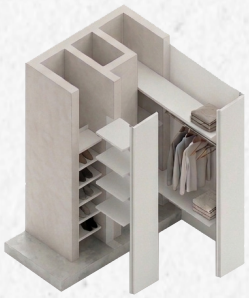

DAZ | Arquitectura + Construcción

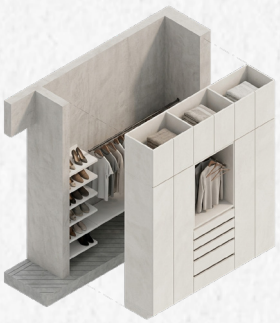

Reading Nook

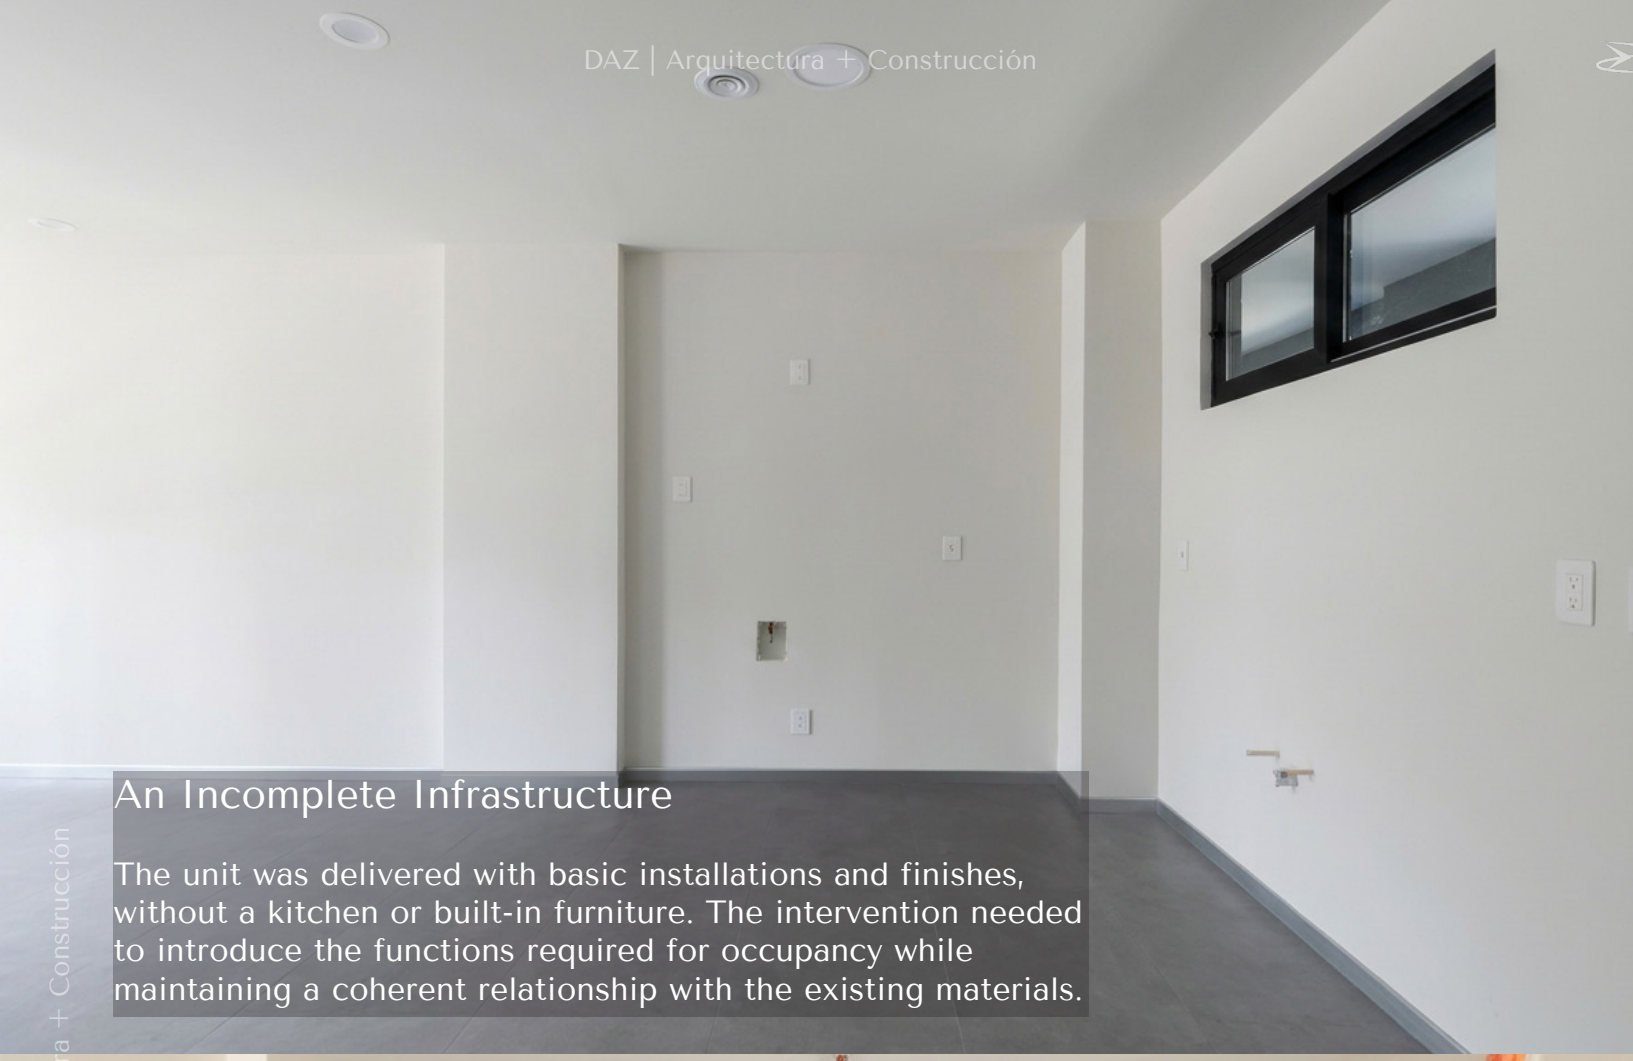

TV Unit

Wardrobe + Shoe Storage

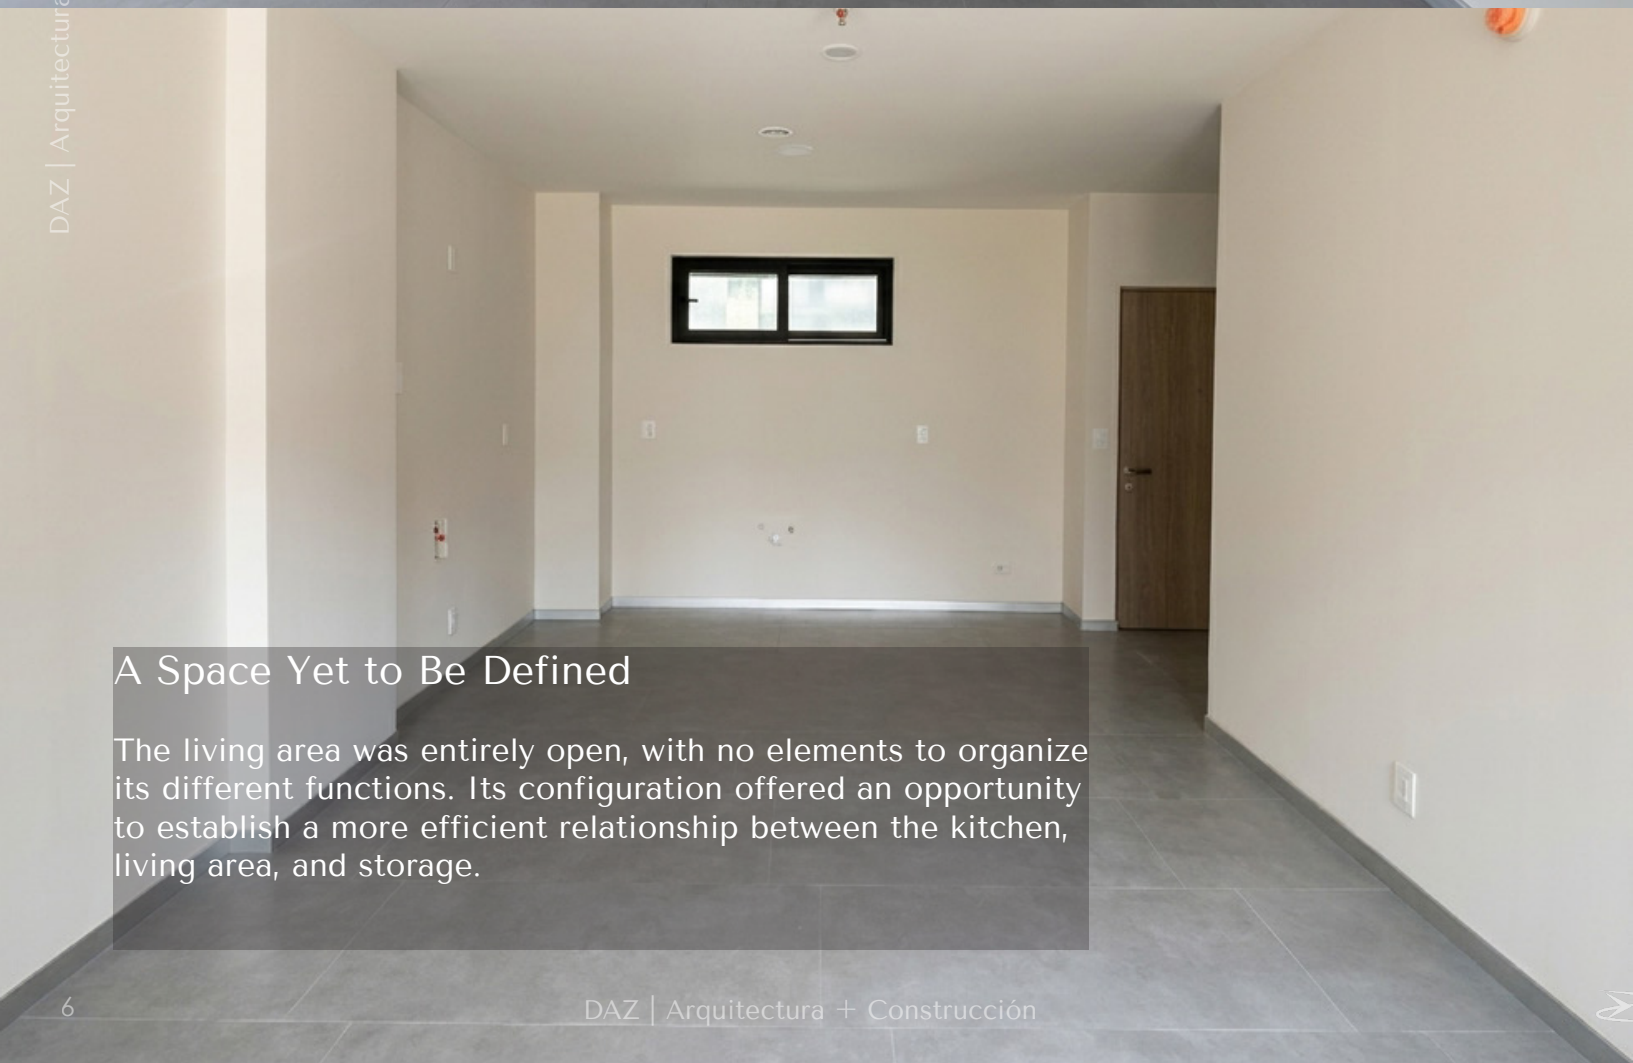

Primary Bedroom Wardrobe

An Incomplete Infrastructure

The unit was delivered with basic installations and finishes, without a kitchen or built-in furniture. The intervention needed to introduce the functions required for occupancy while maintaining a coherent relationship with the existing materials.

DAZ | Arquitectura + Construcción

A Space Yet to Be Defined

The living area was entirely open, with no elements to organize its different functions. Its configuration offered an opportunity to establish a more efficient relationship between the kitchen, living area, and storage.

A Surface That Integrates Multiple Activities

The kitchen was expanded through a furniture composition and a counter that accommodates food preparation, dining, and work. Storage is distributed between lower and upper cabinets, allowing different needs to be concentrated within a single system.

DAZ | Arquitectura + Construcción

Spatial Continuity and Efficiency

The integration of the kitchen, counter, and living area maintains a continuous spatial reading. Shallow furniture, coordinated materials, and integrated storage contribute to a more expansive perception of space and a flexible domestic organization.

"The Home as a Balance Between Togetherness, Privacy, and Contemplation."

ARCHITECTURAL DESIGN · INTERIOR DESIGN

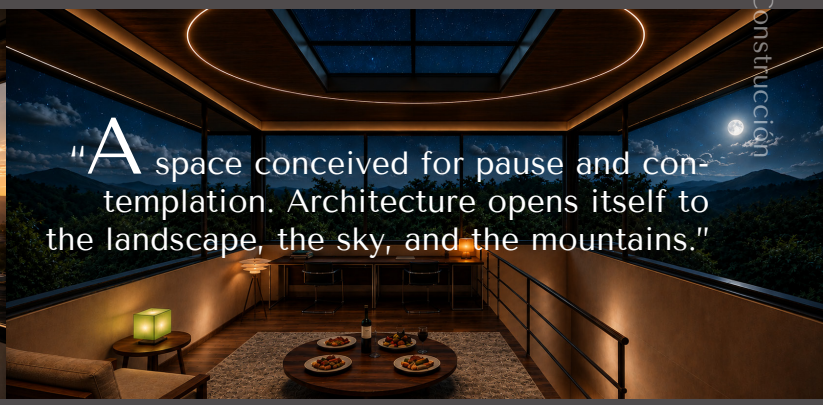

DESIGN

The H-shaped configuration establishes two functionally distinct wings, connected by a central core that organizes access and circulation. This arrangement allows domestic activities to be separated while establishing specific relationships between interior spaces, courtyards, and outdoor areas.

The composition extends through balconies and terraces that open the home toward its surroundings. On the upper level, the circulation culminates in a contemplative space that transforms movement into an experience oriented toward the landscape. Architecture thus finds a balance between the organization of family life and an openness to the outdoors.

"A space conceived for pause and contemplation. Architecture opens itself to the landscape, the sky, and the mountains."

ZONING

Domestic activities are separated into two wings, organized according to their functional requirements.

ARTICULATION

A central core connects the wings, organizes circulation, and establishes spatial continuity between levels.

PRIVACY

Living spaces are distributed to preserve the privacy of each family member without isolating shared areas.

LANDSCAPE

Balconies, terraces, and the contemplative space establish distinct visual relationships with the natural surroundings.

DAZ | Arquitectura + Construcción

Togetherness finds its place in a continuous space, open to the outdoors.

DAZ | Arquitectura + Construcción

"The existing architecture sets the conditions; the intervention finds new ways to relate, organize, and inhabit its spaces."

The transformation of this pool house into a residence begins with an understanding of its original conditions. Preserving the existing construction elements and finishes establishes the framework for the intervention, while integrated furniture and new surface finishes introduce the functions required for residential use and reorganize spatial relationships. The proposal finds its balance in the coexistence of the existing and the new, avoiding modifications that are not strictly necessary.

PRESERVATION

The intervention begins by recognizing the value of what already exists, limiting demolition and alterations to those strictly necessary.

PRIVACY

Access points and transitional spaces are reorganized to protect the privacy of private areas and reduce their exposure to shared spaces.

ZONING

Integrated elements and furniture establish boundaries and transitions between social and private areas without relying on conventional physical partitions.

CONTINUITY

New finishes and furniture elements are incorporated in relation to the existing architecture, maintaining a coherent spatial and material language.

DAZ | Arquitectura + Construcción

An open space, with no defined hierarchy between the social areas and private entrances.

Access to the bedroom remained directly exposed to the common area.

A continuous layout, primarily defined by the existing arches and structural elements.

The entrance hall organizes the transition between the entrance, social area, and private spaces, discreetly integrating access

The entrance hall functions as an intermediate space, providing privacy for the bedroom entrance.

DAZ | Arquitectura + Construcción

Furniture defines the different areas and articulates their relationships while preserving the visual continuity of the space.

DESIGN IN PROGRESS

ARCHITECTURAL DESIGN · INTERIOR DESIGN

DESIGN

"A space for calm and contemplation, where architecture establishes an intimate relationship with its surroundings."

DAZ | Arquitectura + Construcción

An open space for everyday life, where cooking, sharing, and gathering flow seamlessly toward the outdoors.

DAZ | Arquitectura + Construcción

DAZ | Arquitectura + Construcción

DAZ | Arquitectura + Construcción

ATMOSPHERE

The selection of materials, colors, and furniture distinguishes each setting according to its activities while preserving the unity of the interior language.

CONTINUITY

Consistent alignments between openings, doors, finishes, and furniture create an orderly spatial reading and minimize unnecessary interruptions.

RENOVATION · CONSTRUCTION

CONSTRUCTION & PROJECT MANAGEMENT

"Construction as a process of adaptation: interpreting the project, addressing its conditions, and bringing it to reality."

Based on an architectural design developed by an external team, the intervention required reviewing its initial proposals, completing the technical documentation, and adapting its solutions to the actual conditions of the property. Coordination between architecture, structure, and building systems established a viable foundation for execution.

ADAPTATION

Integrating a new residential program requires interpreting existing conditions and adjusting the proposal to its construction possibilities.

FEASIBILITY

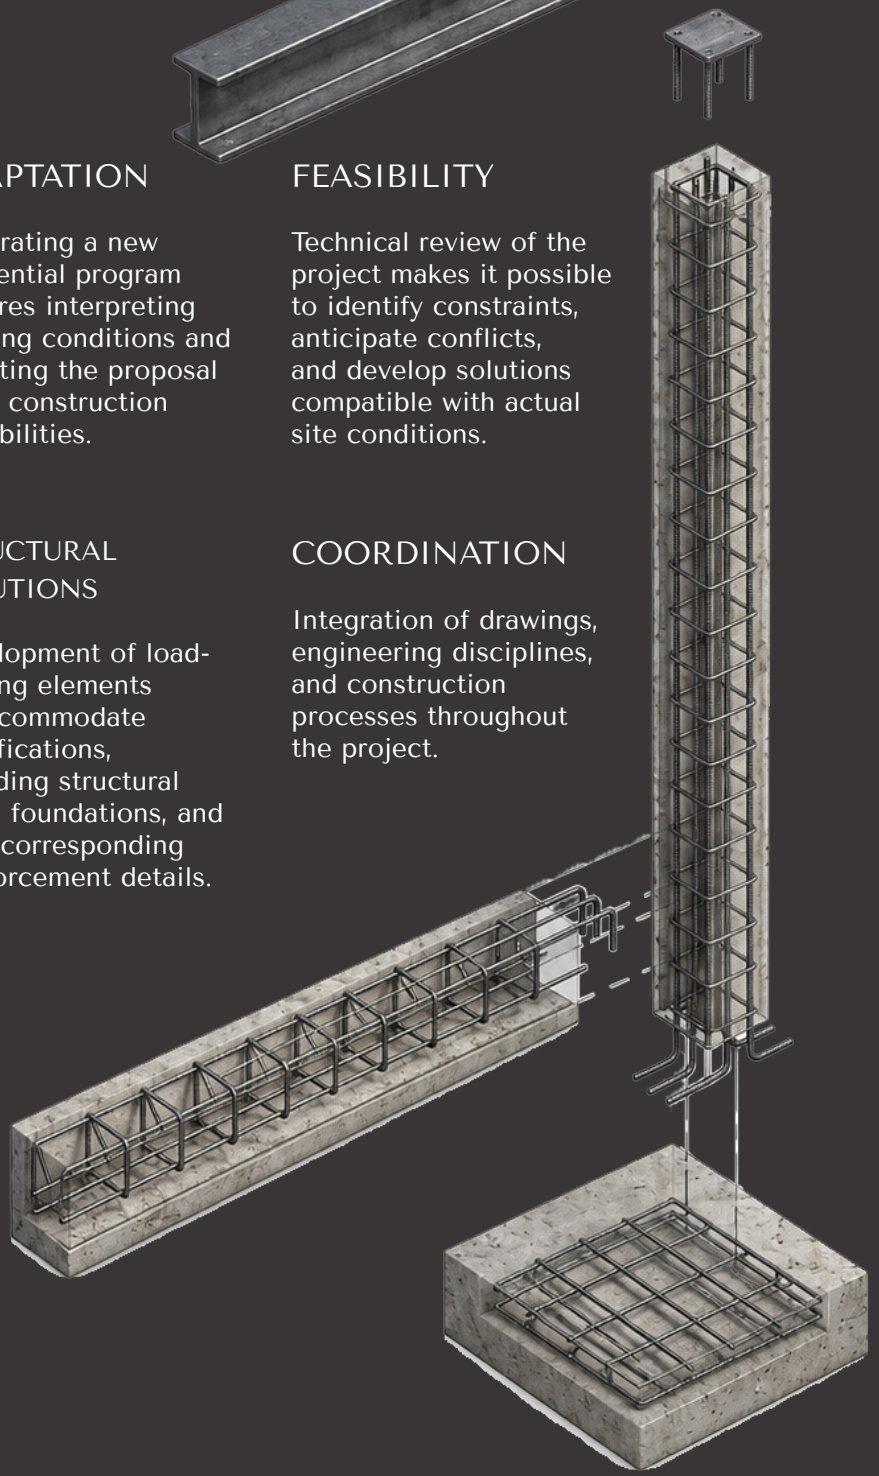

Technical review of the project makes it possible to identify constraints, anticipate conflicts, and develop solutions compatible with actual site conditions.

STRUCTURAL SOLUTIONS

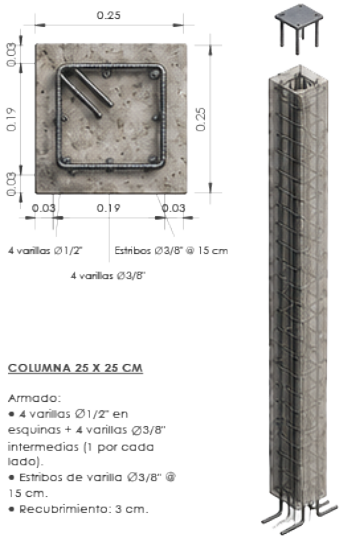

Development of load-bearing elements to accommodate modifications, including structural walls, foundations, and their corresponding reinforcement details.

COORDINATION

Integration of drawings, engineering disciplines, and construction processes throughout the project.

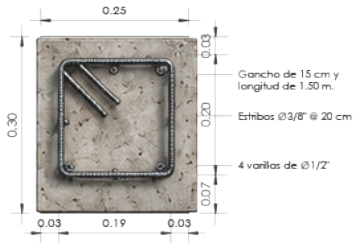

COL-1

COLUMNA 25 X 25 CM

Armado:
- 4 varillas Ø1/2" en esquinas + 4 varillas Ø3/8" intermedias (1 por cada lado).
- Estribos de varilla Ø3/8" @ 15 cm.
- Recubrimiento: 3 cm.

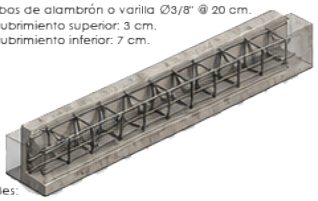

CT-1

CONTRATRABE 25W X 30H CM

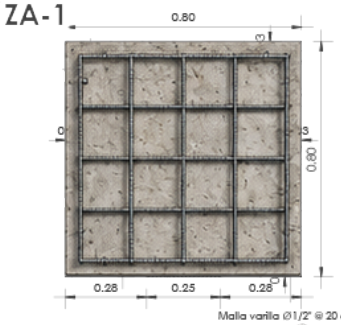

- Plantilla de concreto pobre (CP): 5 cm.

Armado:
- 4 varillas longitudinales Ø1/2".
- Estribos de alambrón o varilla Ø3/8" @ 20 cm.
- Recubrimiento superior: 3 cm.
- Recubrimiento inferior: 7 cm.

Detalles:
- Realizar ganchos de 90° de 15 cm hacia el interior de la columna en las varillas longitudinales.

ZA-1

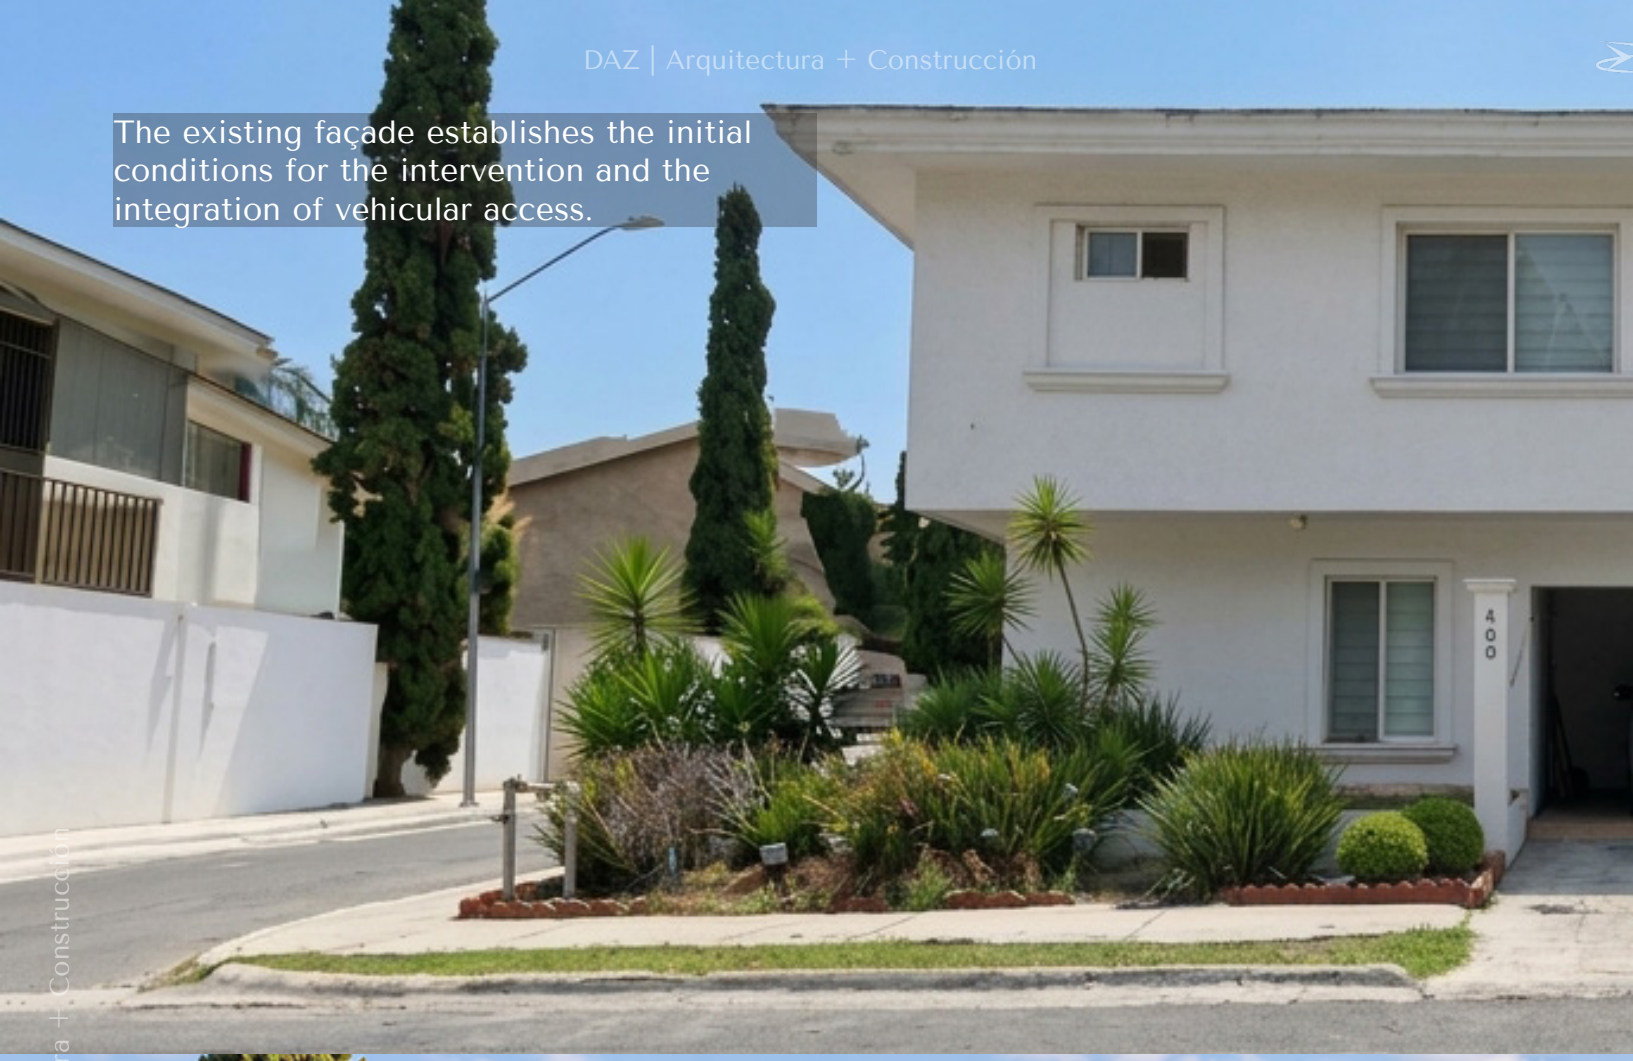

ZAPATA 80W X 80W X 25H CM

- Plantilla de concreto pobre (CP): 5 cm.

Armado:
- Malla inferior con varilla Ø 1/2" @ 20 cm en ambos sentidos.
- Recubrimiento inferior: 7 cm.

The existing façade establishes the initial conditions for the intervention and the integration of vehicular access.

The proposal reconfigures the composition of the main façade and integrates the new vehicular entrance into the overall design of
